PREFACE

The Standard Classification of Goods (SCG) is the standard used by Statistics Canada to collect commodity data and to uniquely identify such data in data banks. It is an extension of the international Harmonized Commodity Description and Coding System, designed to meet Canadian requirements for extra detail.

This third edition of the Standard Classification of Goods covers the 1996 reference year. The first edition applied to the 1988 reference year, and the second edition applied to the 1992 year. For the years between the first two editions, the classification was updated by annual supplements consisting of replacement pages. After 1992, annual supplements were not published but available on a cost recovery basis. The standard for commodity statistics prior to 1988 was the Standard Commodity Classification which was published in 1959 and revised in 1972.

The Standard Classification of Goods provides a structure for the collection of commodity data. Survey managers select from the Standard the appropriate level of detail that is relevant for the nature of the universe surveyed and the purpose of the survey. Where the structure is not suitable, alternative structures may be developed, using classes from the standard as building blocks. This edition identifies the codes selected for collecting 1996 data in current surveys covering imports, exports and production as well as in the annual survey of products shipped and materials used by manufacturers.

The contents of this publication consist of an introductory text, a description of the Standard Classification of Goods (including general rules for interpretation and a list of sections and chapters), the Classification, and four other annexes. The introductory text provides information about the origin of the Classification and its salient features. The interpretative rules provide guidance where the classification descriptions and notes are not sufficient. An overview of the Classification is provided by the list of sections and chapters. The annexes provide supplementary details and three concordances.

The Standard Classification of Goods is published by Standards Division, Shaila Nijhowne, Director. The publication was prepared by Guy Auger, Claudette Bourque, Lois Leahey and Jeff Sims, under the direction of Gilbert Elliot. Subject matter support from other Divisions of Statistics Canada, particularly the International Trade and Industry Divisions, is gratefully acknowledged.

INTRODUCTION

The Standard Classification of Goods (SCG) is one of a number of standards used in Statistics Canada to facilitate the collection and publication of an integrated set of statistics. An example of another such standard is the Standard Industrial Classification, which is designed to classify the establishments that produce goods or services. The SCG provides a structured list of goods, the classes being mutually exclusive, while collectively exhausting the universe of goods to be classified. It consists of a hierarchy of classes, with a different classification criterion applied at each level of the classification. Each class is identified by a code number, with the structure of the code indicating the level of the hierarchy. Although each class identified must have economic significance, the application of the principles of classification does not necessarily result in a similar degree of economic significance among categories at any given level of the hierarchy. Maintaining the stability of the SCG facilitates the comparison of data about goods, among different series for a given reference year or over time for any given series. On the other hand, to reflect changes in the economy and new requirements for statistics, the finest level of detail in the classification structure will be revised periodically.

The SCG replaces the Standard Commodity Classification (SCC), which was the first commodity standard applied by Statistics Canada. The SCC was developed and published during the 1950s and a revised edition was released in 1972. The SCC was implemented gradually over the years. It was introduced in the 1960s for imports (the Import Commodity Classification, or MCC), for exports (the Export Commodity Classification, or XCC), and for the commodities transported by rail, road and water. In the 1970s it was extended to the Census of Manufactures (the Industrial Commodity Classification, or ICC), an expanded import classification (the Canadian International Trade Classification, or CITC), and the Input-Output Tables (the Principal Commodity Groups, or PCG). In the early 1980s it was introduced into the family expenditure surveys and the Consumer Price Index.

The Standard Commodity Classification was not itself used as a coding manual. Instead, applied manuals based upon the standard were developed. These manuals drew from the standard, by using some classes as they were in the SCC, and by combining or splitting other classes, but usually respecting the classification structure. Normally, the first three digits of the standard coding system appeared in the derived classifications.

The SCG is based upon the Harmonized Commodity Description and Coding System (Harmonized System, or HS), in that it incorporates the HS classification (descriptions and codes), legal notes, and the general rules of interpretation. Thereby, it can apply HS classification support such as the explanatory notes, the services of the HS Secretariat and other support associated with the HS. The SCG, however, extends the six-digit HS coding system, by an additional two digits. This extension was required to provide more statistical detail for goods that are manufactured in Canada, for the materials used in their manufacture, and for goods that are imported or exported. The extension also attempted, as far as possible, to maintain comparability with earlier data on goods.

The idea of an international standard commodity description and coding system grew out of a need to simplify and expedite trade documentation of all types, including customs documentation. A group of trading organizations responded to this need. Included in this group were the International Chamber of Shipping, the General Agreement on Tariffs and Trade, and the Economic Commission for Europe. They believed that trade documentation would be faster and more accurate if a standard root code could be built into all product identification codes and assigned at the point of production and if the same root code could be incorporated into all the administrative classifications used in trade (e.g., customs tariffs,

freight rate schedules, statistical classifications). Such an international standard for commodity classification would:

- expedite international trade documentation;
- reduce the expense incurred by redescribing, reclassifying and recoding goods as they move from one classification system to another in the course of international trade;
- facilitate the standardization of trade documentation and the transmission of data;
- improve the accuracy of commodity statistics; and
- facilitate the collection, comparison and analysis of commodity statistics.

The most widely-used international coding system at the time was the Customs Co-operation Council Nomenclature, which was maintained by the World Customs Organization (WCO)¹, an organization to which most countries belong. The WCO was established to standardize tariff nomenclatures and facilitate the clearance of goods at international borders. Accordingly, under their auspices, a committee was established to develop the Harmonized System. Work began in 1973 and the classification was completed in 1983. Canada was represented by officials from Revenue Canada (Customs and Excise) and Statistics Canada.

To implement the HS, each country signs a convention (the International Convention on the Harmonized Commodity Description and Coding System) binding itself to adopt the descriptions and codes of the HS and the rules governing its application for customs tariffs, import statistics and export statistics. The system was adopted in January 1988 by forty-five countries or customs unions, including Canada, the European Economic Community and Japan. It was adopted by the United States of America in January 1989.

To facilitate the compilation of market data, Statistics Canada also implemented the HS for production statistics, beginning with information for 1988. In fact, Statistics Canada has a policy stipulating that the HS become the definitional basis for all of the commodity statistics it produces. In many countries, trade classifications have been based upon the Standard International Trade Classification, and production classifications on national industrial classifications. These countries have experienced difficulty in converting commodity classifications to an HS base. Canada is accustomed to integrated commodity classification since, previously, both trade and production classifications were based upon the SCC.

The classification structure of the HS is sufficiently different from that of the SCC to complicate comparison, particularly for residual classes. The HS is designed primarily to facilitate the identification and coding of goods; therefore, it is principally organized by component material, a characteristic that is apparent from a physical examination of the goods. The SCC, on the other hand, was designed primarily to facilitate analysis of commodity statistics and is principally organized by stage of fabrication (i.e., crude materials, fabricated materials and end products, with the first two categories subdivided by component material, and the third, by use). The benefits of improved quality and comparability of data from adopting the HS, however, are deemed to more than compensate for the breaks in historical continuity and the regrouping of data required for analysis of commodity data.

¹ The official name for this organization is the "Customs Co-operation Council (CCC)". The name, "World Customs Organization (WCO)", was adopted as the informal working name in June 1994 in order to indicate more clearly its nature and world-wide status.

THE STANDARD CLASSIFICATION OF GOODS

a) Structure

The HS (and thus the SCG) was designed for the classification of goods on the basis of their physical characteristics, in the sense that one should be able to apply objective criteria to correctly classify a good or verify its classification, by examining it or asking a laboratory to test its physical or chemical properties. The corollary is that certificates of origin or intended use are not required to classify a good. The use of physical characteristics was thought to be the best way of getting reliably coded data.

The main objective in developing the SCG was to add a level of commodity detail to the HS structure. This was necessary because the detail in the HS reflects the commodities that were significant in international trade during the 1970s. Additional national requirements for commodity statistics, particularly for commodities that are significant mainly in domestic production, had to be added to the HS. In developing the SCG, it was important to identify commodities that are significant for analytical purposes but also are defined in such a way that they can be reported from records kept by respondents or coded from documentation that travels with the goods.

The SCG consists of a hierarchy of chapters (two-digit codes), headings (four-digit codes) and subheadings (six-digit codes and eight-digit codes), organized primarily by component material, beginning with crude products and proceeding through further stages of processing, then mixtures and products made from a variety of materials. Numerical codes are used. A count of these codes, by level, is given in the following table:

SCG Count, By Level

Two-digit codes	96
Four-digit codes	1,241
Six-digit codes	5,113
Eight-digit codes	15,008

At the two-, four- and six-digit level, the list of goods is exhaustive. To obtain a complete list of codes at maximum detail, it is necessary to add those six-digit subheadings that have not been extended to the eight-digit level (codes in which the 7th and 8th digits are blank) to the count of 8 digit codes. The number of lowest-level codes thus obtained is 16,961.

In the classification, commodity descriptions are sometimes employed at the fifth and seventh digit levels to simplify the presentation. Codes have been assigned to the seven-digit level, because some of them were required for data collection.

A system of dashes is employed to clarify the hierarchy. Two dashes and four dashes have been assigned to six- and eight-digit subheadings, respectively. One dash or three dashes have been assigned to intermediate levels.

The structure of the SCG can be illustrated by the example of Sockeye salmon in airtight containers:

16	chapter		Preparations of meat, of fish or of crustaceans, molluscs or other aquatic invertebrates
16.04	heading		Prepared or preserved fish; caviar and caviar substitutes prepared from fish eggs
	subheading	(one dash)	Fish, whole or in pieces, but not minced
1604.11	subheading	(two dashes)	Salmon
1604.11.1	subheading	(three dashes)	In airtight containers
1604.11.14	subheading	(four dashes)	Sockeye

Sometimes the coding structure is simpler, as in Cocoa beans, whole or broken, raw or roasted:

18	chapter		Cocoa and cocoa preparations
18.01	heading		Cocoa beans, whole or broken, raw or roasted
1801.00	subheading	(two dashes)	Cocoa beans, whole or broken, raw or roasted

In this latter case, the heading is repeated at the subheading level, and "00" is added to the code, but in the SCG, the heading description is not again repeated at the eight-digit level (i.e., 1801.00.00). This is because, for many headings there was no need to create further subheadings for data collection below the six-digit level. The addition of a significant number of duplicated six-digit-level descriptions (as illustrated above for the four-digit level) would have added considerably to the number of 8 digit classes.

b) Terminology and spelling

The terminology and spelling in the HS generally follows usage in England or France. The HS Convention calls for application of the HS descriptions exactly as written in English or French, to avoid confusion in comparing statistics. If, for example, the description of a class published by a given country differs from the HS description, users might suspect that the class content has been altered, even though the code is the same. The HS convention (Article 3) does, however, provide some flexibility, by allowing a country to make "...textual adaptations as may be necessary to give effect to the Harmonized System in its domestic law". Countries whose official language is neither English nor French have more freedom in writing descriptions. The application of HS descriptions in Canada creates some difficulties, as Canadian usage of the English and French languages is somewhat different from that in England or France, which were considered as language authorities, respectively, when the HS descriptions were prepared. The concessions (at the six-digit level) to Canadian practice were as follows:

- "aluminium" in the HS is converted to "aluminum" in the SCG
- "tyre" is converted to "tire"
- "trucks" in heading 86.03 has been qualified as "trucks (cars)"
- "wagons" in heading 86.06 has been qualified as "wagons (freight cars)"
- "golf cars" in subheading 8703.10 has been qualified as "golf cars (carts)"
- selected HS terms in heading 87.05 have been replaced by Canadian terms - i.e., "breakdown lorries" by "wreckers", "crane lorries" by "mobile cranes", "concrete-mixer lorries" by "concrete-mixers", "road sweeper lorries" by "road sweepers", and "spraying lorries" by "spraying vehicles"
- "invalid carriages" has been replaced by "wheelchairs" (87.13 and 8714.20)
- the period at the end of four-digit descriptions and the colon at the end of subheadings have been dropped, and there are some other minor differences.

Beyond the six-digit level, the intention was to be consistent with HS subheading descriptions, but

spelling tends to reflect that of the author of the description. Furthermore, a set of alternative descriptions has been developed for use with industry questionnaires where HS terminology was deemed inadequate to elicit the required information, or "stand alone" descriptions (not requiring reference to the heading text) were required.

c) Units of measure

At this time, the SCG does not show a unit of measure for each commodity class. These units, however, are useful, and most commodity surveys collect data for both units of measure and value. Although decisions have been made about the most appropriate unit of measure for most commodities, the remaining problem cases are difficult to resolve. It is difficult, for example, to determine whether weight or number is the most useful unit of measure for some commodities. As well, some commodities may require two units of measure (e.g., weight and area are complementary units of measure for textile fabrics).

d) Industry of origin

Another objective of the SCG is to define each commodity class in such a way that it can be related to its industry of origin. Monthly commodity data for trade and production grouped by industry of origin can be used as a crude indicator of change in industry output, value added, demand for materials, and capacity utilization, and other measures which are normally available only from annual industry reports that are published years later. Furthermore, establishments are usually assigned to industries according to the products they produce. By using a commodity by industry concordance (which matches each of the lowest-level SCG codes to the industry deemed to be the primary producer of this product), it is possible to classify establishments to industries according to their reported products, and to verify the industry code for a given establishment when its annual statistical report is being processed. Although, in fact, some commodities are not principally produced by only one industry and many are produced as secondary products by different industries, the relationship holds true sufficiently well that the assignment of commodities to industries in this manner produces a useful tool. Accordingly, a concordance linking each of the lowest-level SCG codes to its industry of origin (at the four-digit SIC level) has been prepared (see page 15).

e) Interpretative rules and legal notes

Formal notes and rules are an integral part of the HS and, therefore, the SCG. They consist of the section and chapter legal notes at the top of each chapter and a set of interpretive rules (see page 19). These notes and rules are formal, in that countries signing the convention to implement the HS bind themselves to follow them, and any disputes over an HS-based classification of a commodity would be argued in court in their context. The rules and notes are also applicable to the classes at the seven- and eight digit levels.

f) Current coverage

The SCG identifies the level of data collected in surveys of imports, exports, material used and shipments, by respondents to the Annual Survey of Manufactures as well as commodity data gathered in a variety of current surveys. The goods identified for each survey reflects the uniqueness of each universe surveyed and illustrate the manner in which different surveys can be accommodated within one general classification. Furthermore, the classes selected reflect the demand for data, their availability,

questionnaire or coding manual design, method of data collection, and confidentiality of the information. The alphabetic codes used to identify these levels of data collection have the following meanings:

Imports (I)

These codes are related to the commodities for which import data were collected for 1996. The implementation of the HS for import statistics differs from that of the other series, because import statistics are coded according to the joint tariff-statistical code shown in the Customs Tariff (CT). In the CT code, the six-digit HS component is followed by two digits for tariff purposes, then two more digits for statistical purposes; the full ten digits being required to identify a specific commodity. Where statistical requirements are incompatible with the tariff structure, identical statistical breakouts are required from two or more tariff classes to facilitate the regrouping of data to meet statistical requirements. The SCG, having an eight-digit code and being a statistical classification, did not adopt all tariff codes; therefore, it identifies import classes that are identical to tariff classes or to groupings of tariff classes. Annex C to this publication provides a concordance linking the codes of the CT to those of the SCG carrying the flag I.

Exports (E)

These codes appear in the 1996 Canadian Export Classification. There are a few exceptions which are described in annex D.

Shipments (S)

These codes were used to collect data on shipments of goods as reported in Section 8 of the questionnaires for the 1996 Annual Survey of Manufactures¹.

Materials (M)

These codes were used to collect data on energy and materials used by manufacturers as reported in Section 5 and Section 6 of questionnaires for the 1996 Annual Survey of Manufactures¹.

Current surveys (C)

These codes are used to collect data on specific goods in a variety of sub-annual surveys of manufacturers. The C codes cannot be used as a classification in the sense of covering the whole universe as is the case for the I, E, S and M codes. The surveys using these codes focus on very narrow ranges of commodities.

Data are collected for all three of imports, exports and shipments for about 4,000 codes. This is the maximum potential detail for which estimates of domestic markets can be calculated (imports plus shipments minus exports).

It will be evident from a perusal of the flags that the definition of the "Other" classes differs according to the survey identified. When more classes are identified in one survey than another, the "Other" class

¹ Where an S or M code is not shown in a chapter, data is collected at the 2 digit or chapter level

will not be comparable.

In spite of the large number of commodity classes, the commodity detail is insufficient to meet all requirements. This may be due to lack of space within the relevant range of codes or to the necessity to accommodate a different classification structure. In such cases, additional digits are allowed at the discretion of the subject-matter divisions. At this time, for example, nine-digit codes for use in the Annual Survey of Manufactures have been provided for in the SCG file. These codes and their descriptions are shown in Annex B.

g) Updating

The SCG is updated annually. See Annex E for a concordance and indication of the changes between 1995 and 1996. Updates come from a number of sources, including HS changes, incorporation of new detail from new surveys, changes in commodity detail covered by existing surveys, and basic changes resulting from commodity classification research.

Harmonized System Changes 1996

HS changes originate from the HS Committee which is composed of representatives from all signatories to the HS convention. This committee meets regularly at the offices of the World Customs Organization in Brussels, Belgium. It is supported by a permanent secretariat. Proposals for HS changes are submitted to the committee through national representatives. Normally, three or four years elapse between the time a proposal is presented to the committee and the time it affects the collection of data, and thus the SCG. The first set of changes affecting the HS component of the SCG came into effect on January 1, 1992 and consisted of a minimal number of description changes, additions and deletions. The next set of Harmonized System changes came into effect on January 1, 1996 and have been incorporated into this version of the SCG. The 1996 HS changes are significant in number and scope and reflect WCO recommendations or user initiated requests for revision. The text of approximately 125 HS headings, subheadings and classification numbers were modified by the WCO in order to revise or clarify meaning. As well, the 1996 HS changes included 253 deletions of six-digit subheadings, and the addition of 348 new six-digit subheadings. The deletion and addition of subheadings have allowed for more appropriate classification structures, for the incorporation of new technological products such as 'compact disc' products (see HS 8524.31) and to provide more detail for goods whose trade values are high. The 1996 HS changes impact a large number of eight digit SCG codes. A significant portion of the over 2000 code deletions and the over 2600 code additions are a result of the 1996 HS code changes. Every attempt was made to recreate, under the new HS code numbers, the SCG classes that were deleted. In some cases, however, the new HS structure precludes this, the result being a break in historical continuity.

Other changes

Changes also occur when new surveys are incorporated into the SCG. At this time a process of integration takes place, in which commodities at the appropriate level of the SCG are selected and negotiations are undertaken, in order to modify the seventh and eighth digits of the SCG to reflect the best arrangement for a standard. Most changes arise from ongoing surveys. Routinely, in the last half of each calendar year, a series of meetings to discuss changes in commodity detail to be covered by the various surveys in the next reference year takes place. From these meetings, changes to the SCG are made to reflect the latest requirements for commodity data, and survey coverage for the next

data year is settled. Finally, in-depth studies of selected commodity groups are conducted periodically, taking into account the nature of the commodities on the market, requirements for data and modifications to the classification structure. A significant portion of the SCG should undergo such scrutiny annually, from which well-documented proposals for changes should be produced.

Annual updates to the 1988 edition of the manual were released as a set of replacement pages. This proved to be an administrative burden for purchasers of the manual because of the relatively large number of replacement pages, although the actual number of changes was not great compared to the total number of classes, and also because libraries found such updates to be inconvenient. For these reasons, and since the manual is a basic reference rather than an operating manual, it has been decided beginning with the 1992 manual to discontinue issuing an annual updating supplement. Nevertheless, the classification will continue to be updated annually to fulfill its primary function which is to facilitate the integration of the commodity classifications used in Statistics Canada. These updates will be available to user specifications, priced according to the specification. Contact Standards Division for this service.

h) HS implementation, by survey

The SCG is intended as a standard for application to all commodity surveys conducted by Statistics Canada. The following table provides a status report on the extent to which the SCG was implemented by January 1, 1996:

SCG Implementation in Commodity Surveys

Survey	Number of Survey Categories	Implementation Date
Imports	16,818 categories	January 1988
Exports	5,889 categories	January 1988
Annual Survey of Manufactures (240 different industry questionnaires)	7,406 categories of shipments; 3,566 categories of materials	1988 data year
Industry Division current surveys (approx. 54)	varies by industry	about 90% were SCG-based for 1992 data
Water transport	483 categories	1991 data, to be replaced by SCTG ¹
Truck transport	unknown	to be based on SCTG ¹
Rail transport	unknown	to be based on SCTG ¹

¹ Standard Classification of Transported Goods is a classification developed by Statistics Canada and a group of statistical agencies in the United States, based on the SCG, that will permit comparison of data for transported goods.

Dairy product surveys	varies by survey	draft classification ready 1991
Other Agriculture Division surveys	varies by survey	preliminary work done 1991
Family expenditure surveys	over 300 categories of goods	preliminary work done 1992
Consumer Price Index	over 182 categories of goods	no action to date
Capital Expenditure Surveys	varies by survey	field test completed and accepted by Methods and Standards Committee; not yet implemented, with the exception of Electric Power Industry Survey, 1991

i) Concordances

Concordances are prepared to assist users of commodity statistics to compare classifications and to link data. Two of the concordances included in this publication show how the codes actually used to collect data on imports (Annex C) and exports (Annex D) relate to the SCG. These concordances may be used to compare classifications or regroup data since the relationship between exports or imports and the SCG is 1 to 1 or many to one. Concordances in which classes in one classification relate to more than one class in another must provide ratios before the concordances can be used to regroup data.

A variety of concordances is available to assist users of commodity data. Analysts of commodity data may find concordances linking the classifications before and after HS implementation to be of interest. Others find it useful to group commodities by industry. In the latter context we would like to mention the following concordances:

SCG x SIC 1980(annual versions 1988 to 1996)
CT (cumulative 1988 to 1996) x SIC 1980

Contact Standards Division for additional information about concordances.

j) Information in electronic form

Some users prefer to receive classification information in electronic form. Available on diskette are: the codes and descriptions of the classification itself, annual updates and concordances. Please contact Gilbert Elliot of Standards Division for information on these products.

GENERAL RULES FOR THE INTERPRETATION OF THE HARMONIZED SYSTEM

Classification of goods in the Nomenclature shall be governed by the following principles:

1. The titles of Sections, Chapters and sub-Chapters are provided for ease of reference only; for legal purposes, classification shall be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require, according to the following provisions:
2. (a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled.
- (b) Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of Rule 3.
3. When by application of Rule 2(b) or for any other reason, goods are, *prima facie*, classifiable under two or more headings, classification shall be effected as follows:
 - (a) The heading which provides the most specific description shall be preferred to headings providing a more general description. However, when two or more headings each refer to part only of the materials or substances contained in mixed or composite goods or to part only of the items in a set put up for retail sale, those headings are to be regarded as equally specific in relation to those goods, even if one of them gives a more complete or precise description of the goods.
 - (b) Mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to 3(a), shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable.
 - (c) When goods cannot be classified by reference to 3(a) or 3(b), they shall be classified under the heading which occurs last in numerical order among those which equally merit consideration.
4. Goods which cannot be classified in accordance with the above Rules shall be classified under the heading appropriate to the goods to which they are most akin.
5. In addition to the foregoing provisions, the following Rules shall apply in respect of the goods referred to therein:
 - (a) Camera cases, musical instrument cases, gun cases, drawing instrument cases, necklace cases and

similar containers, specially shaped or fitted to contain a specific article or set of articles, suitable for long-term use and presented with the articles for which they are intended, shall be classified with such articles when of a kind normally sold therewith. This Rule does not, however, apply to containers which give the whole its essential character;

- (b) Subject to the provisions of Rule 5(a) above, packing materials and packing containers presented with the goods therein shall be classified with the goods if they are of a kind normally used for packing such goods. However, this provision does not apply when such packing materials or packing containers are clearly suitable for repetitive use.
6. For legal purposes, the classification of goods in the subheadings of a heading shall be determined according to the terms of those subheadings and any related Subheading Notes and, *mutatis mutandis*, to the above Rules, on the understanding that only subheadings at the same level are comparable. For the purposes of this Rule the relative Sections and Chapter Notes also apply, unless the context otherwise requires.

Chapter 16

PREPARATIONS OF MEAT, OF FISH OR OF CRUSTACEANS,
MOLLUSCS OR OTHER AQUATIC INVERTEBRATES

Notes.

1. This Chapter does not cover meat, meat offal, fish, crustaceans, molluscs or other aquatic invertebrates, prepared or preserved by the processes specified in Chapter 2 or 3 or heading No. 05.04.
2. Food preparations fall in this Chapter provided that they contain more than 20% by weight of sausage, meat, meat offal, blood, fish or crustaceans, molluscs or other aquatic invertebrates, or any combination thereof. In cases where the preparation contains two or more of the products mentioned above, it is classified in the heading of Chapter 16 corresponding to the component or components which predominate by weight. These provisions do not apply to the stuffed products of heading No. 19.02 or to the preparations of heading No. 21.03 or 21.04.

Subheading Notes.

1. For the purposes of subheading No. 1602.10, the expression "homogenised preparations" means preparations of meat, meat offal or blood, finely homogenised, put up for retail sale as infant food or for dietetic purposes, in containers of a net weight content not exceeding 250 g. For the application of this definition no account is to be taken of small quantities of any ingredients which may have been added to the preparation for seasoning, preservation or other purposes. These preparations may contain a small quantity of visible pieces of meat or meat offal. This subheading takes precedence over all other subheadings of heading No. 16.02.
2. The fish and crustaceans specified in the subheadings of heading No. 16.04 or 16.05 under their common names only, are of the same species as those mentioned in Chapter 3 under the same name.

**SALT; SULPHUR; EARTHS AND STONE;
PLASTERING MATERIALS, LIME AND CEMENT****Notes.**

1. Except where their context or Note 4 to this Chapter otherwise requires, the headings of this Chapter cover only products which are in the crude state or which have been washed (even with chemical substances eliminating the impurities without changing the structure of the product), crushed, ground, powdered, levigated, sifted, screened, concentrated by flotation, magnetic separation or other mechanical or physical processes (except crystallisation), but not products which have been roasted, calcined, obtained by mixing or subjected to processing beyond that mentioned in each heading.

The products of this Chapter may contain an added anti-dusting agent, provided that such addition does not render the product particularly suitable for a specific use rather than for general use.
2. This Chapter does not cover:
 - a) Sublimed sulphur, precipitated sulphur or colloidal sulphur (heading No. 28.02);
 - b) Earth colours containing 70% or more by weight of combined iron evaluated at Fe₂O₃ (heading No. 28.21);

ORES, SLAG AND ASH

Notes.

1. This Chapter does not cover:

- a) Slag or similar industrial waste prepared as macadam (heading No. 25.17);
- b) Natural magnesium carbonate (magnesite), whether or not calcined (heading No. 25.19);
- c) Basic slag of Chapter 31;
- d) Slag wool, rock wool or similar mineral wools (heading No. 68.06);
- e) Waste or scrap of precious metal or of metal clad with precious metal; other waste or scrap containing precious metal or precious metal compounds, of a kind used principally for the recovery of precious metal (heading No. 71.12);
- f) Copper, nickel or cobalt mattes produced by any process of smelting (Section XV).

2. For the purposes of headings Nos. 26.01 to 26.17, the term "ores" means minerals of mineralogical species actually used in the metallurgical industry for the extraction of mercury, of the metals of heading No. 28.44 or of the metals of Section XIV or XV, even if they are intended for non-metallurgical purposes. Headings Nos. 26.01 to 26.17 do not, however, include minerals which have been submitted to processes not normal to the metallurgical industry.

3. Heading No. 26.20 applies only to ash and residues of a kind used in industry either for the extraction of metals or as a basis for the manufacture of chemical compounds of metals.

Chapter 27

**MINERAL FUELS, MINERAL OILS AND PRODUCTS
OF THEIR DISTILLATION; BITUMINOUS SUBSTANCES;
MINERAL WAXES**

Notes.

1. This Chapter does not cover:

- a) Separate chemically defined organic compounds, other than pure methane and propane which are to be classified in heading No. 27.11;
- b) Medicaments of heading No. 30.03 or 30.04; or
- c) Mixed unsaturated hydrocarbons of heading No. 33.01, 33.02 or 38.05.

2. References in heading No. 27.10 to "petroleum oils and oils obtained from bituminous minerals" include not only petroleum oils and oils obtained from bituminous minerals but also similar oils, as well as those consisting mainly of mixed unsaturated hydrocarbons, obtained by any process, provided that the weight of the non-aromatic constituents exceeds that of the aromatic constituents.

However, the references do not include liquid synthetic polyolefins of which less than 60% by volume distils at 300 °C, after conversion to 1,013 millibars when a reduced-pressure distillation method is used (Chapter 39).

Subheading Notes.

- 1. For the purposes of subheading No. 2701.11, "anthracite" means coal having a volatile matter limit (on a dry, mineral-matter-free basis) not exceeding 14%.
- 2. For the purposes of subheading No. 2701.12, "bituminous coal" means coal having a volatile matter limit (on a dry, mineral-matter-free basis) exceeding 14% and a calorific value limit (on a moist, mineral-matter-free basis) equal to or greater than 5,833 kcal/kg.
- 3. For the purposes of subheadings Nos. 2707.10, 2707.20, 2707.30, 2707.40 and 2707.60, the terms "benzole", "toluole", "xylol", "naphthalene" and "phenols" apply to products which contain more than 50% by weight of benzene, toluene, xylene, naphthalene or phenols, respectively.

Notes.

1. a) Goods (other than radioactive ores) answering to a description in heading No. 28.44 or 28.45 are to be classified in those headings and in no other heading of the Classification.
b) Subject to paragraph (a) above, goods answering to a description in heading No. 28.43 or 28.46 are to be classified in those headings and in no other heading of this Section.
 2. Subject to Note 1 above, goods classifiable in heading No. 30.04, 30.05, 30.06, 32.12, 33.03, 33.04, 33.05, 33.06, 33.07, 35.06, 37.07 or 38.08 by reason of being put up in measured doses or for retail sale are to be classified in those headings and in no other heading of the Classification.
 3. Goods put up in sets consisting of two or more separate constituents, some or all of which fall in this Section and are intended to be mixed together to obtain a product of Section VI or VII, are to be classified in the heading appropriate to that product, provided that the constituents are:
 - a) having regard to the manner in which they are put up, clearly identifiable as being intended to be used together without first being repacked;
 - b) presented together; and
 - c) identifiable, whether by their nature or by the relative proportions in which they are present, as being complementary one to another.

**INORGANIC CHEMICALS; ORGANIC OR INORGANIC COMPOUNDS
OF PRECIOUS METALS, OF RARE-EARTH METALS,
OF RADIOACTIVE ELEMENTS OR OF ISOTOPES**

Notes.

1. Except where their context otherwise require, the headings of this Chapter apply only to:
 - a) Separate chemical elements and separate chemically defined compounds, whether or not containing impurities;
 - b) The Products mentioned in (a) above dissolved in water;
 - c) The Products mentioned in (a) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for specific use rather than for general use;
 - d) The products mentioned in (a), (b) or (c) above with an added stabiliser (including an anti-caking agent) necessary for their preservation or transport;
 - e) The products mentioned in (a), (b), (c) or (d) above with an added anti-dusting agent or a colouring substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for a specific use rather than for general use.
2. STANDARD CLASSIFICATION OF GOODS 1996

Except where the context otherwise requires, double or complex salts are to be classified in heading No. 28.42.

6. Heading No. 28.44 applies only to:

- a) Technetium (atomic No. 43), promethium (atomic No. 61), polonium (atomic No. 84) and all elements with an atomic number greater than 84;
- b) Natural or artificial radioactive isotopes (including those of the precious metals or of the base metals of Sections XIV and XV), whether or not mixed together;
- c) Compounds, inorganic or organic, of these elements or isotopes, whether or not chemically defined, whether or not mixed together;
- d) Alloys, dispersions (including cermets), ceramic products and mixtures containing these elements or isotopes or inorganic or organic compounds thereof and having a specific radioactivity exceeding 74 Bq/g (0.002 microcurie per gram);
- e) Spent (irradiated) fuel elements (cartridges) of nuclear reactors;
- f) Radioactive residues whether or not usable.

The term "isotopes", for the purposes of this Note and of the wording of headings Nos. 28.44 and 28.45, refers to:

- individual nuclides, excluding, however, those existing in nature in the monoisotopic state;
- mixtures of isotopes of one and the same element, enriched in one or several of the said isotopes, that is, elements of which the natural isotopic composition has been artificially modified.

7. Heading No. 28.48 includes copper phosphide (phosphor copper) containing more than 15% by weight of phosphorus.

8. Chemical elements (for example, silicon and selenium) doped for use in electronics are to be classified in this Chapter, provided that they are in forms unworked as drawn, or in the form of cylinders or rods. When cut in the form of discs, wafers or similar forms, they fall in heading No. 38.18.

Chapter 29

ORGANIC CHEMICALS

Notes.

1. Except where the context otherwise requires, the headings of this Chapter apply only to:
 - a) Separate chemically defined organic compounds, whether or not containing impurities;
 - b) Mixtures of two or more isomers of the same organic compound (whether or not containing impurities), except mixtures of acyclic hydrocarbon isomers (other than stereoisomers), whether or not saturated (Chapter 27);
 - c) The products of headings Nos. 29.36 to 29.39 or the sugar ethers and sugar esters, and their salts, of heading No. 29.40, or the products of heading No. 29.41, whether or not chemically defined;
 - d) The Products mentioned in (a), (b) or (c) above dissolved in water;
 - e) The Products mentioned in (a), (b) or (c) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for specific use rather than for general use;
 - f) The products mentioned in (a), (b), (c), (d) or (e) above with an added stabiliser (including an anti-caking agent) necessary for their preservation or transport;
 - g) The products mentioned in (a), (b), (c), (d), (e) or (f) above with an added anti-dusting agent or a colouring or odoriferous substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for specific use rather than for general use;
 - h) The following products, diluted to standard strengths, for the production of azo dyes: diazonium salts, couplers used for these salts and diazotisable amines and their salts.
2. This Chapter does not cover:
 - a) Goods of heading No. 15.04 or crude glycerol of heading No. 15.20;
 - b) Ethyl alcohol (heading No. 22.07 or 22.08);
 - c) Methane and propane (heading No. 27.11);
 - d) The compounds of carbon mentioned in Note 2 to Chapter 28;
 - e) Urea (heading No. 31.02 or 31.05);
 - f) Colouring matter of vegetable or animal origin (heading No. 32.03), synthetic organic colouring matter, synthetic organic products of a kind used as fluorescent brightening agents or as luminophores (heading No. 32.04) or dyes or other colouring matter put up in forms or packings for retail sale (heading No. 32.12);
 - g) Enzymes (heading No. 35.07);
 - h) Metaldehyde, hexamethylenetetramine and similar substances, put up in forms (for example, tablets, sticks or similar forms) for use as fuels, or liquid or liquefied-gas fuels in containers, of a kind used for filling or refilling cigarette or similar lighters, and of a capacity not exceeding 300 cm³ (heading No. 36.06);
 - ij) Products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades, of heading No. 38.13; ink removers put up in packings for retail sale, of heading No. 38.24; or
 - k) Optical elements, for example, of ethylenediamine tartrate (heading No. 90.01).
3. Goods which could be included in two or more of the headings of this Chapter are to be classified in that one of those headings which occurs last in numerical order.
4. In headings Nos. 29.04 to 29.06, 29.08 to 29.11 and 29.13 to 29.20, any reference to halogenated, sulphonated, nitrated or nitrosated derivatives includes a reference to compound derivatives, such as sulphohalogenated, nitrohalogenated, nitrosulphonated or nitrosulphohalogenated derivatives.

Nitro or nitroso groups are not to be taken as "nitrogen-functions" for the purposes of heading No. 29.29.

For the purposes of headings Nos. 29.11, 29.12, 29.14, 29.18 and 29.22, "oxygen-function" is to be restricted to the functions (the characteristic organic oxygen-containing groups) referred to in headings Nos. 29.05 to 29.20.
5. a) The esters of acid-function organic compounds of sub-Chapters I to VII with organic compounds of these sub-Chapters are

to be classified with that compound which is classified in the heading which occurs last in numerical order in these sub-Chapters.

- b) Esters of ethyl alcohol with acid-function organic compounds of sub-Chapters I to VII are to be classified in the same heading as the corresponding acid-function compounds.
- c) Subject to Note 1 to Section VI and Note 2 to Chapter 28:
- 1) Inorganic salts of organic compounds such as acid-, phenol- or enol-function compounds or organic bases, of sub-Chapters I to X or heading No. 29.42, are to be classified in the heading appropriate to the organic compound; and
 - 2) Salts formed between organic compounds of sub-Chapters I to X or heading No. 29.42 are to be classified in the heading appropriate to the base or to the acid (including phenol- or enol-function compounds) from which they are formed, whichever occurs last in numerical order in the Chapter.
- d) Metal alcoholates are to be classified in the same heading as the corresponding alcohols except the case of ethanol (heading No. 29.05).
- e) Halides of carboxylic acids are to be classified in the same heading as the corresponding acids.
6. The compounds of headings Nos. 29.30 and 29.31 are organic compounds the molecules of which contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other non-metals or of metals (such as sulphur, arsenic, mercury or lead) directly linked to carbon atoms.
- Heading No. 29.30 (organo-sulphur compounds) and heading No. 29.31 (other organo-inorganic compounds) do not include sulphonated or halogenated derivatives (including compound derivatives) which, apart from hydrogen, oxygen and nitrogen, only have directly linked to carbon the atoms of sulphur or of a halogen which give them their nature of sulphonated or halogenated derivatives (or compound derivatives).
7. Headings Nos. 29.32, 29.33 and 29.34 do not include epoxides with a three-membered ring, ketone peroxides, cyclic polymers of aldehydes or of thioaldehydes, anhydrides of polybasic carboxylic acids, cyclic esters of polyhydric alcohols or phenols with polybasic acids, or imides of polybasic acids.

These provisions apply only when the ring-position hetero-atoms are those resulting solely from the cyclising function or functions here listed.

Subheading Note.

1. Within any one heading of this Chapter, derivatives of a chemical compound (or group of chemical compounds) are to be classified in the same subheading as that compound (or group of compounds) provided that they are not more specifically covered by any other subheading and that there is no residual subheading named "Other" in the series of subheadings concerned.

Section VII

**PLASTICS AND ARTICLES THEREOF;
RUBBER AND ARTICLES THEREOF**

Notes.

1. Goods put up in sets consisting of two or more separate constituents, some or all of which fall in this Section and are intended to be mixed together to obtain a product of Section VI or VII, are to be classified in the heading appropriate to that product, provided that the constituents are:
 - a) having regard to the manner in which they are put up, clearly identifiable as being intended to be used together without first being repacked;
 - b) presented together; and
 - c) identifiable, whether by their nature or by the relative proportions in which they are present, as being complementary one to another.
 2. Except for the goods of heading No. 39.18 or 39.19, plastics, rubber, and articles thereof, printed with motifs, characters or pictorial representations, which are not merely incidental to the primary use of the goods, fall in Chapter 49.
-

Chapter 39

PLASTICS AND ARTICLES THEREOF

Notes.

1. Throughout the Classification the expression "plastics" means those materials of headings Nos. 39.01 to 39.14 which are or have been capable, either at the moment of polymerisation or at some subsequent stage, of being formed under external influence (usually heat and pressure, if necessary with a solvent or plasticiser) by moulding, casting, extruding, rolling or other process into shapes which are retained on the removal of the external influence.

Throughout the Classification any reference to "plastics" also includes vulcanised fibre. The expression, however, does not apply to materials regarded as textile materials of Section XI.

2. This Chapter does not cover:

- a) Waxes of heading No. 27.12 or 34.04;
- b) Separate chemically defined organic compounds (Chapter 29);
- c) Heparin or its salts (heading No. 30.01);
- d) Solutions (other than collodions) consisting of any of the products specified in headings Nos. 39.01 to 39.13 in volatile organic solvents when the weight of the solvent exceeds 50 % of the weight of the solution (heading No. 32.08); stamping foils of heading No. 32.12;
- e) Organic surface-active agents and preparations of heading No. 34.02;
- f) Run gums or ester gums (heading No. 38.06);
- g) Diagnostic or laboratory reagents on a backing of plastics (heading No. 38.22);
- h) Synthetic rubber, as defined for the purpose of Chapter 40, or articles thereof;
- i) Saddlery or harness (heading No. 42.01) or trunks, suitcases, handbags or other containers of heading No. 42.02;
- k) Plaits, wickerwork or other articles of Chapter 46;
- l) Wall coverings of heading No. 48.14;
- m) Goods of Section XI (textiles and textile articles);
- n) Articles of Section XII (for example, footwear, headgear, umbrellas, sun umbrellas, walking-sticks, whips, riding-crops or parts thereof);
- o) Imitation jewellery of heading No. 71.17;
- p) Articles of Section XVI (machines and mechanical or electrical appliances);
- q) Parts of aircraft or vehicles of Section XVII;
- r) Articles of Chapter 90 (for example, optical elements, spectacle frames, drawing instruments);
- s) Articles of Chapter 91 (for example, clock or watch cases);
- t) Articles of Chapter 92 (for example, musical instruments or parts thereof);
- u) Articles of Chapter 94 (for example, furniture, lamps and lighting fittings, illuminated signs, prefabricated buildings);
- v) Articles of Chapter 95 (for example, toys, games, sports requisites); or
- w) Articles of Chapter 96 (for example, brushes, buttons, slide fasteners, combs, mouthpieces or stems for smoking pipes, cigarette-holders or the like, parts of vacuum flasks or the like, pens, propelling pencils).

3. Headings Nos. 39.01 to 39.11 apply only to goods of a kind produced by chemical synthesis, falling in the following categories:

- a) Liquid synthetic polyolefins of which less than 60% by volume distils at 300 °C, after conversion to 1,013 millibars when a reduced-pressure distillation method is used (headings Nos. 39.01 and 39.02);
- b) Resins, not highly polymerised, of the coumarone-indene type (heading No. 39.11);
- c) Other synthetic polymers with an average of at least 5 monomer units;

d) Silicones (heading No. 39.10);

e) Resols (heading No. 39.09) and other prepolymers.

4. The expression "copolymers" covers all polymers in which no single monomer unit contributes 95 % or more by weight to the total polymer content.

For the purposes of this Chapter, except where the context otherwise requires, copolymers (including co-polycondensates, co-polyaddition products, block copolymers and graft copolymers) and polymer blends are to be classified in the heading covering polymers of that comonomer unit which predominates by weight over every other single comonomer unit. For the purposes of this Note, constituent comonomer units of polymers falling in the same heading shall be taken together.

If no single comonomer unit predominates, copolymers or polymer blends, as the case may be, are to be classified in the heading which occurs last in numerical order among those which equally merit consideration.

5. Chemically modified polymers, that is those in which only appendages to the main polymer chain have been changed by chemical reaction, are to be classified in the heading appropriate to the unmodified polymer. This provision does not apply to graft copolymers.
6. In headings Nos. 39.01 to 39.14, the expression "primary forms" applies only to the following forms:
- Liquids and pastes, including dispersions (emulsions and suspensions) and solutions;
 - Blocks of irregular shape, lumps, powders (including moulding powders), granules, flakes and similar bulk forms.
7. Heading No. 39.15 does not apply to waste, parings and scrap of a single thermoplastic material, transformed into primary forms (headings Nos. 39.01 to 39.14).
8. For the purposes of heading No. 39.17, the expression "tubes, pipes and hoses" means hollow products, whether semi-manufactures or finished products, of a kind generally used for conveying, conducting or distributing gases or liquids (for example, ribbed garden hose, perforated tubes). This expression also includes sausage casings and other lay-flat tubing. However, except for the last-mentioned, those having an internal cross-section other than round, oval, rectangular (in which the length does not exceed 1.5 times the width) or in the shape of a regular polygon are not to be regarded as tubes, pipes and hoses but as profile shapes.
9. For the purposes of heading No. 39.18, the expression "wall or ceiling coverings of plastics" applies to products in rolls, of a width not less than 45 cm, suitable for wall or ceiling decoration, consisting of plastics fixed permanently on a backing of any material other than paper, the layer of plastics (on the face side) being grained, embossed, coloured, design-printed or otherwise decorated.
10. In headings Nos. 39.20 and 39.21, the expression "plates, sheets, film, foil and strip" applies only to plates, sheets, film, foil and strip (other than those of Chapter 54) and to blocks of regular geometric shape, whether or not printed or otherwise surface-worked, uncut or cut into rectangles (including squares) but not further worked (even if when so cut they become articles ready for use).
11. Heading No. 39.25 applies only to the following articles, not being products covered by any of the earlier headings of sub-Chapter II:
- Reservoirs, tanks (including septic tanks), vats and similar containers, of a capacity exceeding 300 l;
 - Structural elements used, for example, in floors, walls or partitions, ceilings or roofs;
 - Gutters and fittings therefor;
 - Doors, windows and their frames and thresholds for doors;
 - Balconies, balustrades, fencing, gates and similar barriers;
 - Shutters, blinds (including Venetian blinds) and similar articles and parts and fittings thereof;
 - Large-scale shelving for assembly and permanent installation, for example, in shops, workshops, warehouses;
 - Ornamental architectural features, for example, flutings, cupolas, dovecotes; and
 - Fittings and mountings intended for permanent installation in or on doors, windows, staircases, walls or other parts of buildings, for example, knobs, handles, hooks, brackets, towel rails, switch-plates and other protective plates.

Subheading Note.

1. Within any one heading of this Chapter, polymers (including copolymers) and chemically modified polymers are to be classified according to the following provisions :

a) Where there is a subheading named "Other" in the same series :

- 1) The designation in a subheading of a polymer by the prefix "poly" (e.g., polyethylene and polyamide-6,6) means that the constituent monomer unit or monomer units of the named polymer taken together must contribute 95 % or more by weight of the total polymer content.
- 2) The copolymers named in subheadings Nos. 3901.30, 3903.20, 3903.30 and 3904.30 are to be classified in those subheadings, provided that the comonomer units of the named copolymers contribute 95 % or more by weight of the total polymer content.
- 3) Chemically modified polymers are to be classified in the subheading named "Other", provided that the chemically modified polymers are not more specifically covered by another subheading.
- 4) Polymers not meeting 1), 2) or 3) above, are to be classified in the subheading, among the remaining subheadings in the series, covering polymers of that monomer unit which predominates by weight over every other single comonomer unit. For this purpose, constituent monomer units of polymers falling in the same subheading shall be taken together. Only the constituent comonomer units of the polymers in the series of subheadings under consideration are to be compared.

b) Where there is no subheading named "Other" in the same series :

- 1) Polymers are to be classified in the subheading covering polymers of that monomer unit which predominates by weight over every other single comonomer unit. For this purpose, constituent monomer units of polymers falling in the same subheading shall be taken together. Only the constituent comonomer units of the polymers in the series under consideration are to be compared.
- 2) Chemically modified polymers are to be classified in the subheading appropriate to the unmodified polymer.

Polymer blends are to be classified in the same subheading as polymers of the same monomer units in the same proportions.

Chapter 40

RUBBER AND ARTICLES THEREOF

Notes.

1. Except where the context otherwise requires, throughout the Classification the expression "rubber" means the following products, whether or not vulcanised or hard: natural rubber, balata, gutta-percha, guayule, chicle and similar natural gums, synthetic rubber, factice derived from oils, and such substances reclaimed.
2. This Chapter does not cover:
 - a) Goods of Section XI (textiles and textile articles);
 - b) Footwear or parts thereof of Chapter 64;
 - c) Headgear or parts thereof (including bathing caps) of Chapter 65;
 - d) Mechanical or electrical appliances or parts thereof of Section XVI (including electrical goods of all kinds), of hard rubber;
 - e) Articles of Chapter 90, 92, 94, or 96; or
 - f) Articles of Chapter 95 (other than sports gloves and articles of headings Nos. 40.11 to 40.13).
3. In headings Nos. 40.01 to 40.03 and 40.05, the expression "primary forms" applies only to the following forms:
 - a) Liquids and pastes (including latex, whether or not pre-vulcanised, and other dispersions and solutions);
 - b) Blocks of irregular shape, lumps, bales, powders, granules, crumbs and similar bulk forms.
4. In Note 1 to this Chapter and in heading No. 40.02, the expression "synthetic rubber" applies to:
 - a) Unsaturated synthetic substances which can be irreversibly transformed by vulcanisation with sulphur into non-thermoplastic substances which, at a temperature between 18 °C and 29 °C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length. For the purposes of this test, substances necessary for the cross-linking, such as vulcanising activators or accelerators, may be added; the presence of substances as provided for by Note 5 (b) (ii) and (iii) is also permitted. However, the presence of any substances not necessary for the cross-linking, such as extenders, plasticisers and fillers, is not permitted;
 - b) Thioplasts (TM); and
 - c) Natural rubber modified by grafting or mixing with plastics, depolymerised natural rubber, mixtures of unsaturated synthetic substances with saturated synthetic high polymers provided that all the above-mentioned products comply with the requirements concerning vulcanisation, elongation and recovery in (a) above.
5. a) Headings Nos. 40.01 and 40.02 do not apply to any rubber or mixture of rubbers which has been compounded, before or after coagulation, with:
 - i) vulcanising agents, accelerators, retarders or activators (other than those added for the preparation of pre-vulcanised rubber latex);
 - ii) pigments or other colouring matter, other than those added solely for the purpose of identification;
 - iii) Plasticisers or extenders (except mineral oil in the case of oil-extended rubber), fillers, reinforcing agents, organic solvents or any other substances, except those permitted under (b);
- b) The presence of the following substances in any rubber or mixture of rubbers shall not affect its classification in heading No. 40.01 or 40.02, as the case may be, provided that such rubber or mixture of rubbers retains its essential character as raw material:
 - i) emulsifiers or anti-tack agents;
 - ii) small amounts of breakdown products of emulsifiers
 - iii) very small amounts of the following: heat-sensitive agents (generally for obtaining thermosensitive rubber latexes), cationic surface-active agents (generally for obtaining electro-positive rubber latexes), antioxidants, coagulants, crumbling agents, freeze-resisting agents, peptisers, preservatives, stabilisers, viscosity-control agents, or similar special-purpose additives.
6. For the purposes of heading No. 40.04, the expression "waste, parings and scrap" means rubber waste, parings and scrap from the manufacture or working of rubber and rubber goods definitely not usable as such because of cutting-up, wear or other

STANDARD CLASSIFICATION OF GOODS 1996

reasons.

7. Thread wholly of vulcanised rubber, of which any cross-sectional dimension exceeds 5 mm, is to be classified as strip, rods or profile shapes, of heading No. 40.08.
8. Heading No. 40.10 includes conveyor or transmission belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated, coated, covered or sheathed with rubber.
9. In headings Nos. 40.01, 40.02, 40.03, 40.05 and 40.08, the expressions "plates", "sheets" and "strip" apply only to plates, sheets and strip and to blocks of regular geometric shape, uncut or simply cut to rectangular (including square) shape, whether or not having the character of articles and whether or not printed or otherwise surface-worked, but not otherwise cut to shape or further worked.

In heading No. 40.08 the expressions "rods" and "profile shapes" apply only to such products, whether or not cut to length or surface-worked but not otherwise worked.

- c) having a brightness of less than 60%, a caliper of 254 micrometres (microns) or less and an ash content more than 8%.

Heading No. 48.02 does not, however, cover filter paper or paperboard (including tea-bag paper) or felt paper and paperboard.

- 5. In this Chapter "kraft paper and paperboard" means paper and paperboard of which not less than 80% by weight of the total fibre content consists of fibres obtained by the chemical sulphate or soda processes.
- 6. Except where the terms of the headings otherwise require, paper, paperboard, cellulose wadding and webs of cellulose fibres answering to a description in two or more of the headings Nos. 48.01 to 48.11 are to be classified under that one of such headings which occurs last in numerical order in the Nomenclature.
- 7. A) Headings Nos. 48.01, 48.02, 48.04 to 48.08, 48.10 and 48.11 apply only to paper, paperboard, cellulose wadding and webs of cellulose fibres:
 - a) in strips or rolls of a width exceeding 15 cm; or
 - b) in rectangular (including square) sheets with one side exceeding 36 cm and the other side exceeding 15 cm in unfolded state.

Except that hand-made paper and paperboard in any size or shape as made directly and having all its edges deckled remains classified, subject to the provisions of Note 6, in heading No. 48.02.

B) Headings Nos. 48.03 and 48.09 apply only to paper, cellulose wadding and webs of cellulose fibres :

- a) in strips or rolls of a width exceeding 36 cm; or
- b) in rectangular (including square) sheets with one side exceeding 36 cm and the other side exceeding 15 cm in the unfolded state.

- 9. Heading No. 48.20 does not cover loose sheets or cards, cut to size, whether or not printed, embossed or perforated.
- 10. Heading No. 48.23 applies, *inter alia*, to perforated paper or paperboard cards for Jacquard or similar machines and paper lace.
- 11. Except for the goods of heading No. 48.14 or 48.21, paper, paperboard, cellulose wadding and articles thereof, printed with

motifs, characters or pictorial representations, which are not merely incidental to the primary use of the goods, fall in Chapter 49.

When no one textile material predominates by weight, the goods are to be classified as if consisting wholly of that one textile material which is covered by the heading which occurs last in numerical order among those which equally merit consideration.

(B) For the purposes of the above rule:

- a) Gimped horsehair yarn (heading No. 51.10) and metallised yarn (heading No. 56.05) are to be treated as a single textile material the weight of which is to be taken as the aggregate of the weights of its components; for the classification of

STANDARD CLASSIFICATION OF GOODS 1996

woven fabrics, metal thread is to be regarded as a textile material;

- b) The choice of appropriate heading shall be effected by determining **first** the Chapter and **then** the applicable heading within that Chapter, disregarding any materials not classified in that Chapter;
- c) When both Chapters 54 and 55 are involved with any other Chapter, Chapters 54 and 55 are to be treated as a single Chapter;
- d) Where a Chapter or a heading refers to goods of different textile materials, such materials are to be treated as a single textile material.

(C) The provisions of paragraphs (A) and (B) above apply also to the yarns referred to in Notes 3, 4, 5 or 6 below.

4. (A) For the purposes of Chapters 50, 51, 52, 54 and 55, the expression "put up for retail sale" in relation to yarn means, subject to the exceptions in paragraph (B) below, yarn (single, multiple (folded) or cabled) put up:

- a) On cards, reels, tubes or similar supports, of a weight (including support) not exceeding:

Single yarn of nylon or other polyamides, or of polyesters.....	60 cN/tex
Multiple (folded) or cabled yarn of nylon or other polyamides, or of polyesters.....	53 cN/tex
Single, multiple (folded) or cabled yarn of viscose rayon.....	27 cN/tex.

7. For the purposes of this Section, the expression "made up" means:

- a) Cut otherwise than into squares or rectangles;
- b) Produced in the finished state, ready for use (or merely needing separation by cutting dividing threads) without sewing or other working (for example, certain dusters, towels, table cloths, scarf squares, blankets);
- c) Hemmed or with rolled edges, or with a knotted fringe at any of the edges, but excluding fabrics the cut edges of which have been prevented from unravelling by whipping or by other simple means;
- d) Cut to size and having undergone a process of drawn thread work;
- e) Assembled by sewing, gumming or otherwise (other than piece goods consisting of two or more lengths of identical material joined end to end and piece goods composed of two or more textiles assembled in layers, whether or not padded);
- f) Knitted or crocheted to shape, whether presented as separate items or in the form of a number of items in the length.

8. For the purposes of Chapters 50 to 60 :

- a) Chapters 50 to 55 and 60 and, except where the context otherwise requires, Chapters 56 to 59 do not apply to goods made up within the meaning of Note 7 above; and
- b) Chapters 50 to 55 and 60 do not apply to goods of Chapters 56 to 59.

9. The woven fabrics of Chapters 50 to 55 include fabrics consisting of layers of parallel textile yarns superimposed on each other at acute or right angles. These layers are bonded at the intersections of the yarns by an adhesive or by thermal bonding.

10. Elastic products consisting of textile materials combined with rubber threads are classified in this Section.

11. For the purposes of this Section, the expression "impregnated" includes "dipped".

12. For the purposes of this Section, the expression "polyamides" includes "aramids".
13. Unless the context otherwise requires, textile garments of different headings are to be classified in their own headings even if put up in sets for retail sale. For the purposes of this Note, the expression "textile garments" means garments of headings Nos. 61.01 to 61.14 and headings Nos. 62.01 to 62.11.

Subheading Notes.

1. In this Section and, where applicable, throughout the Classification, the following expressions have the meanings hereby assigned to them:

a) Elastomeric yarn

Filament yarn, including monofilament, of synthetic textile material, other than textured yarn, which does not break on being extended to three times its original length and which returns, after being extended to twice its original length, within a period of five minutes, to a length not greater than one and a half times its original length.

b) Unbleached yarn

Yarn which:

- i) has the natural colour of its constituent fibres and has not been bleached, dyed (whether or not in the mass) or printed; or
- ii) is of indeterminate colour ("grey yarn"), manufactured from garnetted stock.

Such yarn may have been treated with a colourless dressing or fugitive dye (which disappears after simple washing with soap) and, in the case of man-made fibres, treated in the mass with delustring agents (for example, titanium dioxide).

c) Bleached yarn

Yarn which:

- i) has undergone a bleaching process, is made of bleached fibres or, unless the context otherwise requires, has been dyed white (whether or not in the mass) or treated with a white dressing;
- ii) consists of a mixture of unbleached and bleached fibres; or
- iii) is multiple (folded) or cabled and consists of unbleached and bleached yarns.

d) Coloured (dyed or printed) yarn

Yarn which:

- i) is dyed (whether or not in the mass) other than white or in a fugitive colour or printed, or made from dyed or printed fibres;
- ii) consists of a mixture of dyed fibres of different colours or of a mixture of unbleached or bleached fibres with coloured fibres (marl or mixture yarns), or is printed in one or more colours at intervals to give the impression of dots;
- iii) is obtained from slivers or rovings which have been printed; or
- iv) is multiple (folded) or cabled and consists of unbleached or bleached yarn and coloured yarn.

The above definitions also apply, *mutatis mutandis*, to monofilament and to strip or the like of Chapter 54.

e) Unbleached woven fabric

Woven fabric made from unbleached yarn and which has not been bleached, dyed or printed. Such fabric may have been treated with a colourless dressing or a fugitive dye.

f) Bleached woven fabric

Woven fabric which:

- i) has been bleached or, unless the context otherwise requires, dyed white or treated with a white dressing, in the piece;
- ii) consists of bleached yarn; or
- iii) consists of unbleached and bleached yarn.

g) Dyed woven fabric

Woven fabric which:

- i) is dyed a single uniform colour other than white (unless the context otherwise requires) or has been treated with a coloured finish other than white (unless the context otherwise requires), in the piece; or
- ii) consists of coloured yarn of a single uniform colour.

h) Woven fabrics of yarns of different colours

Woven fabric (other than printed woven fabric) which:

- i) consists of yarns of different colours or yarns of different shades of the same colour (other than the natural colour of the constituent fibres);
- ii) consists of unbleached or bleached yarn and coloured yarn; or
- iii) consists of marl or mixture yarns.

(In all cases, the yarn used in selvages and piece ends is not taken into consideration.)

ij) Printed woven fabric

Woven fabric which has been printed in the piece, whether or not made from yarns of different colours.

(The following are also regarded as printed woven fabrics: woven fabrics bearing designs made, for example, with a brush or spray gun, by means of transfer paper, by flocking or by the batik process.)

The process of mercerisation does not affect the classification of yarns or fabrics within the above categories.

k) Plain weave

A fabric construction in which each yarn of the weft passes alternately over and under successive yarns of the warp and each yarn of the warp passes alternately over and under successive yarns of the weft.

2. (A) Products of Chapters 56 to 63 containing two or more textile materials are to be regarded as consisting wholly of that textile material which would be selected under Note 2 to this Section for the classification of a product of Chapters 50 to 55 consisting of the same textile materials.

(B) For the application of this rule:

- a) where appropriate, only the part which determines the classification under Interpretative Rule 3 shall be taken into account;
 - b) in the case of textile products consisting of a ground fabric and a pile or looped surface no account shall be taken of the ground fabric;
 - c) in the case of embroidery of heading No. 58.10 and goods thereof, only the ground fabric shall be taken into account. However, embroidery without visible ground, and goods thereof, shall be classified with reference to the embroidering threads alone.

MAN-MADE FILAMENTS

Notes.

1. Throughout the Classification, the term "man-made fibres" means staple fibres and filaments of organic polymers produced by manufacturing processes, either:

- a) By polymerisation of organic monomers, such as polyamides, polyesters, polyurethanes or polyvinyl derivatives; or
- b) By chemical transformation of natural organic polymers (for example, cellulose, casein, proteins or algae), such as viscose rayon, cellulose acetate, cupro or alginates.

The terms "synthetic" and "artificial", used in relation to fibres, mean: synthetic: fibres as defined at (a); artificial: fibres as defined at (b).

The terms "man-made", "synthetic" and "artificial" shall have the same meanings when used in relation to "textile materials".

2. Headings Nos. 54.02 and 54.03 do not apply to synthetic or artificial filament tow of Chapter 55.

MAN-MADE STAPLE FIBRES

Note.

1. Headings Nos. 55.01 and 55.02 apply only to man-made filament tow, consisting of parallel filaments of a uniform length equal to the length of the tow, meeting the following specifications:

- a) Length of tow exceeding 2 m;
- b) Twist less than 5 turns per metre;
- c) Measuring per filament less than 67 decitex;
- d) Synthetic filament tow only: the tow must be drawn, that is to say, be incapable of being stretched by more than 100% of its length;
- e) Total measurement of tow more than 20,000 decitex.

Tow of a length not exceeding 2 m is to be classified in heading No. 55.03 or 55.04.

Chapter 56

**WADDING, FELT AND NONWOVENS; SPECIAL YARNS;
TWINE, CORDAGE, ROPES AND CABLES
AND ARTICLES THEREOF**

Notes.

1. This Chapter does not cover:
 - a) Wadding, felt or nonwovens, impregnated, coated or covered with substances or preparations (for example, perfumes or cosmetics of Chapter 33, soaps or detergents of heading No. 34.01, polishes, creams or similar preparations of heading No. 34.05, fabric softeners of heading No. 38.09) where the textile material is present merely as a carrying medium;
 - b) Textile products of heading No. 58.11;
 - c) Natural or artificial abrasive powder or grain, on a backing of felt or nonwovens (heading No. 68.05);
 - d) Agglomerated or reconstituted mica, on a backing of felt or nonwovens (heading No. 68.14); or
 - e) Metal foil on a backing of felt or nonwovens (Section XV).
2. The term "felt" includes needleloom felt and fabrics consisting of a web of textile fibres the cohesion of which has been enhanced by a stitch-bonding process using fibres from the web itself.
3. Headings Nos. 56.02 and 56.03 cover respectively felt and nonwovens, impregnated, coated, covered or laminated with plastics or rubber whatever the nature of these materials (compact or cellular).

 Heading No. 56.03 also includes nonwovens in which plastics or rubber forms the bonding substance.

 Headings Nos. 56.02 and 56.03 do not, however, cover:
 - a) Felt impregnated, coated, covered or laminated with plastics or rubber, containing 50% or less by weight of textile material or felt completely embedded in plastics or rubber (Chapter 39 or 40);
 - b) Nonwovens, either completely embedded in plastics or rubber, or entirely coated or covered on both sides with such materials, provided that such coating or covering can be seen with the naked eye with no account being taken of any resulting change of colour (Chapter 39 or 40); or
 - c) Plates, sheets or strip of cellular plastics or cellular rubber combined with felt or nonwovens, where the textile material is present merely for reinforcing purposes (Chapter 39 or 40).
4. Heading No. 56.04 does not cover textile yarn, or strip or the like of heading No. 54.04 or 54.05, in which the impregnation, coating or covering cannot be seen with the naked eye (usually Chapters 50 to 55); for the purpose of this provision, no account should be taken of any resulting change of colour.

Chapter 59

**IMPREGNATED, COATED, COVERED OR LAMINATED TEXTILE
FABRICS; TEXTILE ARTICLES OF A KIND
SUITABLE FOR INDUSTRIAL USE**

Notes.

1. Except where the context otherwise requires, for the purposes of this Chapter the expression "textile fabrics" applies only to the woven fabrics of Chapter 50 to 55 and headings Nos. 58.03 and 58.06, the braids and ornamental trimmings in the piece of heading No. 58.08 and the knitted or crocheted fabrics of heading No. 60.02.

2. Heading No. 59.03 applies to:

a) Textile fabrics, impregnated, coated, covered or laminated with plastics, whatever the weight per square metre and whatever the nature of the plastic material (compact or cellular), other than:

1) Fabrics in which the impregnation, coating or covering cannot be seen with the naked eye (usually Chapters 50 to 55, 58 or 60); for the purpose of this provision, no account should be taken of any resulting change of colour;

2) Products which cannot, without fracturing, be bent manually around a cylinder of a diameter of 7 mm, at a temperature between 15 °C and 30 °C (usually Chapter 39);

3) Products in which the textile fabric is either completely embedded in plastics or entirely coated or covered on both sides with such material, provided that such coating or covering can be seen with the naked eye with no account being taken of any resulting change of colour (Chapter 39);

4) Fabrics partially coated or partially covered with plastics and bearing designs resulting from these treatments (usually Chapters 50 to 55, 58 or 60);

5) Plates, sheets or strip of cellular plastics, combined with textile fabric, where the textile fabric is present merely for reinforcing purposes (Chapter 39); or

6) Textile products of heading No. 58.11;

b) Fabrics made from yarn, strip or the like, impregnated, coated, covered or sheathed with plastics, of heading No. 56.04.

3. For the purposes of heading No. 59.05, the expression "textile wall coverings" applies to products in rolls, of a width of not less than 45 cm, suitable for wall or ceiling decoration, consisting of a textile surface which has been fixed on a backing or has been treated on the back (impregnated or coated to permit pasting).

This heading does not, however, apply to wall coverings consisting of textile flock or dust fixed directly on a backing of paper (heading No. 48.14) or on a textile backing (generally heading No. 59.07).

4. For the purposes of heading No. 59.06, the expression "rubberised textile fabrics" means:

a) Textile fabrics impregnated, coated, covered or laminated with rubber,

i) Weighing not more than 1,500 g/m²; or

ii) Weighing more than 1,500 g/m² and containing more than 50% by weight of textile material;

b) Fabrics made from yarn, strip or the like, impregnated, coated, covered or sheathed with rubber, of heading No. 56.04;

c) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square metre.

This heading does not, however, apply to plates, sheets or strip of cellular rubber, combined with textile fabric, where the textile fabric is present merely for reinforcing purposes (Chapter 40), or textile products of heading No. 58.11.

5. Heading No. 59.07 does not apply to:

a) Fabrics in which the impregnation, coating or covering cannot be seen with the naked eye (usually Chapters 50 to 55, 58 or 60); for the purpose of this provision, no account should be taken of any resulting change of colour;

b) Fabrics painted with designs (other than painted canvas being theatrical scenery, studio back-cloths or the like);

c) Fabrics partially covered with flock, dust, powdered cork or the like and bearing designs resulting from these treatments; however, imitation pile fabrics remain classified in this heading;

d) Fabrics finished with normal dressings having a basis of amylaceous or similar substances;

e) Wood veneered on a backing of textile fabrics (heading No. 44.08);

STANDARD CLASSIFICATION OF GOODS 1996

- f) Natural or artificial abrasive powder or grain, on a backing of textile fabrics (heading No. 68.05);
 - g) Agglomerated or reconstituted mica, on a backing of textile fabrics (heading No. 68.14); or
 - h) Metal foil on a backing of textile fabrics (Section XV).
6. Heading No. 59.10 does not apply to:
- a) Transmission or conveyor belting, of textile material, of a thickness of less than 3 mm; or
 - b) Transmission or conveyor belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated, coated, covered or sheathed with rubber (heading No. 40.10).
7. Heading No. 59.11 applies to the following goods, which do not fall in any other heading of Section XI:
- a) Textile products in the piece, cut to length or simply cut to rectangular (including square) shape (other than those having the character of the products of headings Nos. 59.08 to 59.10), the following only:
 - i) Textile fabrics, felt and felt-lined woven fabrics, coated, covered or laminated with rubber, leather or other material, of a kind used for card clothing, and similar fabrics of a kind used for other technical purposes, including narrow fabrics made of velvet impregnated with rubber, for covering weaving spindles (weaving beams);
 - ii) Bolting cloth;
 - iii) Straining cloth of a kind used in oil presses or the like, of textile material or of human hair;
 - iv) Flat woven textile fabrics with multiple warp or weft, whether or not felted, impregnated or coated, of a kind used in machinery or for other technical purposes;
 - v) Textile fabric reinforced with metal, of a kind used for technical purposes;
 - vi) Cords, braids and the like, whether or not coated, impregnated or reinforced with metal, of a kind used in industry as packing or lubricating materials;
 - b) Textile articles (other than those of headings Nos. 59.08 to 59.10) of a kind used for technical purposes (for example, textile fabrics and felts, endless or fitted with linking devices, of a kind used in paper-making or similar machines (for example, for pulp or asbestos-cement), gaskets, washers, polishing discs and other machinery parts).

Chapter 61

ARTICLES OF APPAREL AND CLOTHING ACCESSORIES,
KNITTED OR CROCHETED**Notes.**

1. This Chapter applies only to made up knitted or crocheted articles.
2. This Chapter does not cover:
 - a) Goods of heading No. 62.12;
 - b) Worn clothing or other worn articles of heading No. 63.09; or
 - c) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.21).
3. For the purposes of headings Nos. 61.03 and 61.04:
 - a) The term "suit" means a set of garments composed of two or three pieces made up, in respect of their outer surface, in the same fabric and comprising :
 - one suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition whose front is made from the same fabric as the outer surface of the other components of the set and whose back is made from the same fabric as the lining of the suit coat or jacket; and
 - one garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs.

All of the components of a "suit" must be of the same fabric construction, colour and composition; they must also be of the same style and of corresponding or compatible size. However, these components may have piping (a strip of fabric sewn into the seam) in a different fabric.

If several separate components to cover the lower part of the body are presented together (for example, two pair of trousers or trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be one pair of trousers or, in the case of women's or girl's suits, the skirt or divided skirt, the other garments being considered separately.

The term "suit" includes the following sets of garments, whether or not they fulfil all the above conditions:

 - morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
 - evening dress (tailcoat), generally made of black fabric, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
 - dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.
 - b) The term "ensemble" means a set of garments (other than suits and articles of heading No. 61.07, 61.08 or 61.09), composed of several pieces made up in identical fabric, put up for retail sale, and comprising:
 - one garment designed to cover the upper part of the body, with the exception of pullovers which may form a second upper garment in the sole context of twin sets, and of waistcoats which may also form a second upper garment, and
 - one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.

All of the components of an ensemble must be of the same fabric construction, style, colour and composition; they also must be of corresponding or compatible size. The term "ensemble" does not apply to track suits or ski suits, of heading No. 61.12.
4. Headings Nos. 61.05 and 61.06 do not cover garments with pockets below the waist, with a ribbed waistband or other means of tightening at the bottom of the garment, or garments having an average of less than 10 stitches per linear centimetre in each direction counted on an area measuring at least 10 cm x 10 cm. Heading No. 61.05 does not cover sleeveless garments.
5. Heading No. 61.09 does not cover garments with a drawstring, ribbed waistband or other means of tightening at the bottom of the garment.
6. For the purposes of heading No. 61.11:
 - a) The expression "babies' garments and clothing accessories" means articles for young children of a body height not exceeding

STANDARD CLASSIFICATION OF GOODS 1996

86 cm; it also covers babies' napkins;

- b) Articles which are, *prima facie*, classifiable both in heading No. 61.11 and in other headings of this Chapter are to be classified in heading No. 61.11.

7. For the purposes of heading No. 61.12, "ski suits" means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or alpine). They consist either of:

- a) a "ski overall", that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or footstraps; or
- b) a "ski ensemble", that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
- one garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
 - one pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The "ski ensemble" may also consist of an overall similar to the one mentioned in paragraph (a) above and a type of padded, sleeveless jacket worn over the overall.

All the components of a "ski ensemble" must be made up in a fabric of the same texture, style and composition whether or not of the same colour; they also must be of corresponding or compatible size.

8. Garments which are, *prima facie*, classifiable both in heading No. 61.13 and in other headings of this Chapter, excluding heading No. 61.11, are to be classified in heading No. 61.13.
9. Garments of this Chapter designed for left over right closure at the front shall be regarded as men's or boys' garments, and those designed for right over left closure at the front as women's or girls' garments. These provisions do not apply where the cut of the garment clearly indicates that it is designed for one or other of the sexes.

Garments which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in the headings covering women's or girls' garments.

10. Articles of this Chapter may be made of metal thread.

Chapter 62

ARTICLES OF APPAREL AND CLOTHING ACCESSORIES,
NOT KNITTED OR CROCHETED

Notes.

1. This Chapter applies only to made up articles of any textile fabric other than wadding, excluding knitted or crocheted articles (other than those of heading No. 62.12.)
2. This Chapter does not cover:
 - a) Worn clothing or other worn articles of heading No. 63.09; or
 - b) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.21).
3. For the purposes of headings Nos. 62.03 and 62.04:

- a) The term "suit" means a set of garments composed of two or three pieces made up, in respect of their outer surface, in the same fabric and comprising :

- one suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition whose front is made from the same fabric as the outer surface of the other components of the set and whose back is made from the same fabric as the lining of the suit coat or jacket; and
- one garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs.

All of the components of a "suit" must be of the same fabric construction, colour and composition; they must also be of the same style and of corresponding or compatible size. However, these components may have piping (a strip of fabric sewn into the seam) in a different fabric.

If several separate components to cover the lower part of the body are presented together (for example, two pairs of trousers or trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be one pair of trousers or, in the case of women's or girls' suits, the skirt or divided skirt, the other garments being considered separately.

The term "suit" includes the following sets of garments, whether or not they fulfil all the above conditions :

- morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
 - evening dress (tailcoat), generally made of black fabric, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
 - dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.
- b) The term "ensemble" means a set of garments (other than suits and articles of heading No. 62.07 or 62.08) composed of several pieces made up in identical fabric, put up for retail sale, and comprising:
 - one garment designed to cover the upper part of the body, with the exception of waistcoats which may also form a second upper garment, and
 - one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.

All of the components of an ensemble must be of the same fabric construction, style, colour and composition; they also must be of corresponding or compatible size. The term "ensemble" does not apply to track suits or ski suits, of heading No. 62.11.

4. For the purposes of heading No. 62.09:
 - a) The expression "babies' garments and clothing accessories" means articles for young children of a body height not exceeding 86 cm; it also covers babies' napkins;
 - b) Articles which are, *prima facie*, classifiable both in heading No. 62.09 and in other headings of this Chapter are to be classified in heading No. 62.09.
5. Garments which are, *prima facie*, classifiable both in heading No. 62.10 and in other headings of this Chapter, excluding heading No. 62.09, are to be classified in heading No. 62.10.

STANDARD CLASSIFICATION OF GOODS 1996

6. For the purposes of heading No. 62.11, "ski suits" means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or alpine). They consist either of:
- a "ski overall", that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or footstraps; or
 - a "ski ensemble", that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
 - one garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
 - one pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.
- The "ski ensemble" may also consist of an overall similar to the one mentioned in paragraph (a) above and a type of padded, sleeveless jacket worn over the overall.
- All the components of a "ski ensemble" must be made up in a fabric of the same texture, style and composition whether or not of the same colour; they also must be of corresponding or compatible size.
7. Scarves and articles of the scarf type, square or approximately square, of which no side exceeds 60 cm, are to be classified as handkerchiefs (heading No. 62.13). Handkerchiefs of which any side exceeds 60 cm are to be classified in heading No. 62.14.
8. Garments of this Chapter designed for left over right closure at the front shall be regarded as men's or boys' garments, and those designed for right over left closure at the front as women's or girls' garments. These provisions do not apply where the cut of the garment clearly indicates that it is designed for one or other of the sexes.
- Garments which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in the headings covering women's or girls' garments.
9. Articles of this Chapter may be made of metal thread.

GLASS AND GLASSWARE

Notes.

1. This Chapter does not cover:

- a) Goods of heading No. 32.07 (for example, vitrifiable enamels and glazes, glass frit, other glass in the form of powder, granules or flakes);
- b) Articles of Chapter 71 (for example, imitation jewellery);
- c) Optical fibre cables of heading No. 85.44, electrical insulators (heading No. 85.46) or fittings of insulating material of heading No. 85.47;
- d) Optical fibres, optically worked optical elements, hypodermic syringes, artificial eyes, thermometers, barometers, hydrometers or other articles of Chapter 90;
- e) Lamps or lighting fittings, illuminated signs, illuminated name-plates or the like, having a permanently fixed light source, or parts thereof of heading No. 94.05;
- f) Toys, games, sports requisites, Christmas tree ornaments or other articles of Chapter 95 (excluding glass eyes without mechanisms for dolls or for other articles of Chapter 95); or
- g) Buttons, fitted vacuum flasks, scent or similar sprays or other articles of Chapter 96.

2. For the purposes of headings Nos. 70.03, 70.04 and 70.05:

- a) glass is not regarded as "worked" by reason of any process it has undergone before annealing;
- b) cutting to shape does not affect the classification of glass in sheets;
- c) the expression "absorbent, reflecting or non-reflecting layer" means a microscopically thin coating of metal or of a chemical compound (for example, metal oxide) which absorbs, for example, infra-red light or improves the reflecting qualities of the glass while still allowing it to retain a degree of transparency or translucency; or which prevents light from being reflected on the surface of the glass.

3. The products referred to in heading No. 70.06 remain classified in that heading whether or not they have the character of articles.

4. For the purposes of heading No. 70.19, the expression "glass wool" means:

- a) Mineral wools with a silica (SiO_2) content not less than 60% by weight;
- b) Mineral wools with a silica (SiO_2) content less than 60% but with an alkaline oxide (K_2O or Na_2O) content exceeding 5% by weight or a boric oxide (B_2O_3) content exceeding 2% by weight.

Mineral wools which do not comply with the above specifications fall in heading No. 68.06.

5. Throughout the Classification, the expression "glass" includes fused quartz and other fused silica.

Subheading Note.

- 1. For the purposes of subheadings Nos. 7013.21, 7013.31 and 7013.91, the expression "lead crystal" means only glass having a minimum lead monoxide (PbO) content by weight of 24%.

- more than 0.05% of bismuth.

c) Silicon-electrical steel

Alloy steels containing by weight at least 0.6% but not more than 6% of silicon and not more than 0.08% of carbon. They may also contain by weight not more than 1% of aluminum but no other element in a proportion that would give the steel the characteristics of another alloy steel.

d) High speed steel

Alloy steels containing, with or without other elements, at least two of the three elements molybdenum, tungsten and vanadium with a combined content by weight of 7% or more, 0.6% or more of carbon and 3 to 6% of chromium.

e) Silico-manganese steel

Alloy steels containing by weight:

STANDARD CLASSIFICATION OF GOODS 1996

- not more than 0.7 % of carbon,
- 0.5% or more but not more than 1.9% of manganese, and
- 0.6% or more but not more than 2.3% of silicon, but no other element in a proportion that would give the steel the characteristics of another alloy steel.

2. For the classification of ferro-alloys in the subheadings of heading No. 72.02 the following rule should be observed:

A ferro-alloy is considered as binary and classified under the relevant subheading (if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in Chapter Note 1 (c); by analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.

For the application of this rule the unspecified "other elements" referred to in Chapter Note 1 (c) must each exceed 10% by weight.

ARTICLES OF IRON OR STEEL

Notes.

1. In this Chapter the expression "cast iron" applies to products obtained by casting in which iron predominates by weight over each of the other elements and which do not comply with the chemical composition of steel as defined in Note 1 (d) to Chapter 72.
2. In this Chapter the word "wire" means hot or cold-formed products of any cross-sectional shape, of which no cross-sectional dimension exceeds 16 mm.

COPPER AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Refined copper**

Metal containing at least 99.85% by weight of copper; or

Metal containing at least 97.5% by weight of copper, provided that the content by weight of any other element does not exceed the limit specified in the following table:

TABLE - Other elements

Element	Limiting content % by weight
Ag Silver	0.25
As Arsenic	0.5
Cd Cadmium	1.3
Cr Chromium	1.4
Mg Magnesium	0.8
Pb Lead	1.5
S Sulphur	0.7
Sn Tin	0.8
Te Tellurium	0.8
Zn Zinc	1
Zr Zirconium	0.3
Other elements *, each	0.3

* Other elements are, for example, Al, Be, Co, Fe, Mn, Ni, Si.

b) **Copper alloys**

Metallic substances other than unrefined copper in which copper predominates by weight over each of the other elements, provided that:

- i) the content by weight of at least one of the other elements is greater than the limit specified in the foregoing table; or
- ii) the total content by weight of such other elements exceeds 2.5%.

c) **Master alloys**

Alloys containing with other elements more than 10% by weight of copper, not usefully malleable and commonly used as an additive in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals. However, copper phosphide (phosphor copper) containing more than 15% by weight of phosphorus falls in heading No. 28.48.

d) **Bars and rods**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, drawing stock (wire-rod) or tubes, are however to be taken to be unwrought copper of heading No. 74.03.

e) **Profiles**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

f) **Wire**

Roiled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

In the case of heading No. 74.14, however, the term "wire" applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

g) Plates, sheets, strip and foil

Flat-surfaced products (other than the unwrought products of heading No. 74.03), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles of products of other headings.

Headings Nos. 74.09 and 74.10 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

h) Tubes and pipes

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be taken to be tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Copper-zinc base alloys (brasses)

Alloys of copper and zinc, with or without other elements. When other elements are present:

- zinc predominates by weight over each of such other elements;
- any nickel content by weight is less than 5% (see copper-nickel-zinc alloys (nickel silvers)); and
- any tin content by weight is less than 3% (see copper-tin alloys (bronzes)).

b) Copper-tin base alloys (bronzes)

Alloys of copper and tin, with or without other elements. When other elements are present, tin predominates by weight over each of such other elements, except that when the tin content is 3% or more the zinc content by weight may exceed that of tin but must be less than 10%.

c) Copper-nickel-zinc base alloys (nickel silvers)

Alloys of copper, nickel and zinc, with or without other elements. The nickel content is 5% or more by weight (see copper-zinc alloys (brasses)).

d) Copper-nickel base alloys

Alloys of copper and nickel, with or without other elements but in any case containing by weight not more than 1% of zinc. When other elements are present, nickel predominates by weight over each of such other elements.

Chapter 75

NICKEL AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Bars and rods

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

b) Profiles

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

c) Wire

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

d) Plates, sheets, strip and foil

Flat-surfaced products (other than the unwrought products of heading No. 75.02), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading No. 75.06 applies, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

e) Tubes and pipes

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular, or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Notes.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Nickel, not alloyed

Metal containing by weight at least 99% of nickel plus cobalt, provided that:

- i) the cobalt content by weight does not exceed 1.5%, and
- ii) the content by weight of any other element does not exceed the limit specified in the following table:

STANDARD CLASSIFICATION OF GOODS 1996

TABLE - Other elements

Element		Limiting content % by weight
Fe	Iron	0.5
O	Oxygen	0.4
Other elements, each		0.3

b) Nickel alloys

Metallic substances in which nickel predominates by weight over each of the other elements provided that:

- i) the content by weight of cobalt exceeds 1.5%,
- ii) the content by weight of at least one of the other elements is greater than the limit specified in the foregoing table, or
- iii) the total content by weight of elements other than nickel plus cobalt exceeds 1%.

2. Notwithstanding the provisions of Chapter Note 1 c), for the purposes of subheading No. 7508.10 the term "wire" applies only to products, whether or not in coils, of any cross-sectional shapes, of which no cross-sectional dimension exceeds 6 mm.

Chapter 76

ALUMINUM AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Bars and rods**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

b) **Profiles**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

c) **Wire**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

d) **Plates, sheets, strip and foil**

Flat-surfaced products (other than the unwrought products of heading No. 76.01), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Headings Nos. 76.06 and 76.07 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

e) **Tubes and pipes**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Notes.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Aluminum, not alloyed**

Metal containing by weight at least 99% of aluminum, provided that the content by weight of any other element does not exceed the limit specified in the following table:

STANDARD CLASSIFICATION OF GOODS 1996

TABLE - Other elements

Element	Limiting content % by weight
Fe + Si (iron plus silicon)	1
Other elements ¹ , each	0.1 ²
(1) Other elements are, for example, Cr, Cu, Mg, Mn, Ni, Zn.	
(2) Copper is permitted in a proportion greater than 0.1% but not more than 0.2%, provided that neither the chromium nor manganese content exceeds 0.05%.	

b) Aluminum alloys

Metallic substances in which aluminum predominates by weight over each of the other elements, provided that:

- the content by weight of at least one of the other elements or of iron plus silicon taken together is greater than the limit specified in the foregoing table; or
- the total content by weight of such other elements exceeds 1%.

- Notwithstanding the provisions of Chapter Note 1 c), for the purposes of subheading No. 7616.91 the term "wire" applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

LEAD AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Bars and rods**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

b) **Profiles**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

c) **Wire**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

d) **Plates, sheets, strip and foil**

Flat-surfaced products (other than the unwrought products of heading No. 78.01), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading No. 78.04 applies, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

e) **Tubes and pipes**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

Chapter 85

**ELECTRICAL MACHINERY AND EQUIPMENT AND PARTS THEREOF;
SOUND RECORDERS AND REPRODUCERS,
TELEVISION IMAGE AND SOUND RECORDERS AND REPRODUCERS, AND
PARTS AND ACCESSORIES OF SUCH ARTICLES**

Notes.

1. This Chapter does not cover:

- a) Electrically warmed blankets, bed pads, foot-muffs or the like; electrically warmed clothing, footwear or ear pads or other electrically warmed articles worn on or about the person;
- b) Articles of glass of heading No. 70.11; or
- c) Electrically heated furniture of Chapter 94.

2. Headings Nos. 85.01 to 85.04 do not apply to goods described in heading No. 85.11, 85.12, 85.40, 85.41 or 85.42.

However, metal tank mercury arc rectifiers remain classified in heading No. 85.04.

3. Heading No. 85.09 covers only the following electro-mechanical machines of the kind commonly used for domestic purposes:

- a) Vacuum cleaners, floor polishers, food grinders and mixers, and fruit or vegetable juice extractors, of any weight;
- b) Other machines provided the weight of such machines does not exceed 20 kg.

The heading does not, however, apply to fans or ventilating or recycling hoods incorporating a fan, whether or not fitted with filters (heading No. 84.14), centrifugal clothes-dryers (heading No. 84.21), dish washing machines (heading No. 84.22), household washing machines (heading No. 84.50), roller or other ironing machines (heading No. 84.20 or 84.51), sewing machines (heading No. 84.52), electric scissors (heading No. 85.08) or to electro-thermic appliances (heading No. 85.16).

4. For the purposes of heading No. 85.34 "printed circuits" are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).

The expression "printed circuits" does not cover circuits combined with elements other than those obtained during the printing process, nor does it cover individual, discrete resistors, capacitors or inductances. Printed circuits may, however, be fitted with non-printed connecting elements.

Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading No. 85.42.

5. For the purposes of headings Nos. 85.41 and 85.42:

A) "Diodes, transistors and similar semiconductor devices" are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field;

B) "Electronic integrated circuits and microassemblies" are:

- a) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semiconductor material (doped silicon, for example) and are inseparably associated;
- b) Hybrid integrated circuits in which passive elements (resistors, capacitors, interconnections, etc.), obtained by thin- or thick-film technology, and active elements (diodes, transistors, monolithic integrated circuits, etc.) obtained by semiconductor technology, are combined to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include discrete components;
- c) Microassemblies of the moulded module, micromodule or similar types, consisting of discrete, active or both active and passive, components which are combined and interconnected.

For the classification of the articles defined in this Note, headings Nos. 85.41 and 85.42 shall take precedence over any other heading in the Classification which might cover them by reference to, in particular, their function.

6. Records, tapes and other media of heading No. 85.23 or 85.24 remain classified in those headings, whether or not they are presented with the apparatus for which they are intended.

7. For the purposes of heading No. 85.48, "spent primary cells, spent primary batteries and spent electric accumulators" are those

STANDARD CLASSIFICATION OF GOODS 1996

which are neither usable as such because of breakage, cutting-up, wear or other reasons, nor capable of being recharged.

Subheading Note.

1. Subheadings Nos. 8519.92 and 8527.12 cover only cassette-players with built-in amplifier, without built-in loudspeaker, capable of operating without an external source of electric power and the dimensions of which do not exceed 170 mm x 100mm x 45 mm.

AND PARTS AND ACCESSORIES THEREOF**

Notes.

1. This Chapter does not cover railway or tramway rolling-stock designed solely for running on rails.
2. For the purposes of this Chapter, "tractors" means vehicles constructed essentially for hauling or pushing another vehicle, appliance or load, whether or not they contain subsidiary provision for the transport, in connection with the main use of the tractor, of tools, seeds, fertilisers or other goods.

Machines and working tools designed for fitting to tractors of heading No. 87.01 as interchangeable equipment remain classified in their respective headings even if presented with the tractor, and whether or not mounted on it.
3. Motor chassis fitted with cabs fall in headings Nos. 87.02 to 87.04, and not in heading No. 87.06.
4. Heading No. 87.12 includes all children's bicycles. Other children's cycles fall in heading No. 95.01.

ANNEX B

Supplementary Classes Used to Collect Data on Goods Used or Produced by Manufacturers, 1996

Occasionally, data is required at finer levels of detail than specified in the Standard. This is an example of such a requirement. It is an extension of the SCG for application with the 1996 Annual Survey of Manufacturers. This example also illustrates an appropriate application of the Standard.

The extra detail serves two functions. Firstly, it provides a method of identifying and storing supplementary detail. For example, code 2008.99.12.1 provides for shipments of apple pie fillings. Secondly, it provides for alternative detail. Alternatives may be required for various reasons. The code structure may be inadequate; e.g., 2517.10.42.2 provides for very finely ground limestone, screen size 1.6 mm to 6.2 mm. The code structure may be inappropriate for a particular survey area; e.g., 2208.20.10 provides for grape wine spirits in bulk whereas data is also required for matured grape wine spirits, hence, code 2208.20.00.1 is used. Non commodity information may be required such as various industry specifications for books, "published only", 4901.99.50.1 and "published and printed", 4901.99.50.2, or use of a product such as limestone produced for making cement for the export market, 2521.00.30.1.

ANNEX C

Concordance between the 1996 Standards Classification of Goods and the 1996 version of the Canadian Customs Tariff

This concordance will clarify the relationship between the SCG and the Customs Tariff (CT), a matter that has confused some people. As explained in the introduction, the SCG and the Customs Tariff share the first 6 digits of the code but beyond that, the code numbers are different. The concordance displays the relationship between the two codes. The SCG was fixed for the 1996 reference year but the Customs Tariff continued to change, although almost all of the changes were effective on January 1st. Only those SCG codes identified by an "I" flag have been used for this concordance.

A few points of explanation may be helpful. At first glance those cases where more than one Tariff code relate to an SCG code will be obvious from blanks in the SCG column. Usually this happens when the Tariff structure is different than the Standard; e.g., the species list for frozen fish imports under HS 0304.20 is different, in structure, than the species list for frozen fish exports and since the standard follows the export structure the import classes are grouped at the 6 digit level of the SCG. Sometimes it is because the Tariff detail is not thought to be relevant for the analysis of commodity data; e.g., "mushrooms imported for processing", 0709.51.10.00 is not broken out in the SCG. The next point to note is the use of "00" for the 7th and 8th digits of the Tariff code. This indicates that there is no Tariff breakdown for the HS subheading and often, but not always, the SCG 7th and 8th digits appear as the 9th and 10th digits of the Tariff code; e.g., "Atlantic cod", 0302.50.00.10 appears as 0302.50.10 in the SCG. For the balance of the code pairs, the structure of the Tariff code follows the Tariff breakdown (7th and 8th digits) and the 7th and 8th digits of the SCG code are usually different than the 9th and 10th digits of the Tariff code; e.g., "oysters, shelled, fresh or chilled", 0307.10.20.10 appears as 0307.10.21 in the SCG.

ANNEX D

Concordance between the 1996 Standard Classification of Goods and the 1996 Canadian Export Classification

The Canadian Export Classification (CEC) is regarded as a subset of the SCG, in that the exact codes and the descriptions used to collect export data are selected from the SCG. From a total of 5,889 export classes in 1996, there were 222 exceptions to this convention. The SCG does not include a trailing "0" for a 7-digit code, while the CEC will have a trailing "0". These are not seen to be differences.

The following table provides a list of the SCG codes and the corresponding non standard codes that appear in the export classification for the same classes.

ANNEX E

Concordance between the 1995 and the 1996 Standard Classification of Goods

The following shows the relationship between the 1995 SCG and the 1996 SCG where the code numbers differ between the years. Included are the relationships showing one code matching exactly to only one code in the other year, thus in fact representing a code renumbering for the same good. For example SCG 0207.23 in 1995 is linked to SCG 0207.33 in 1996. Each of these SCG codes appears only once in the list and therefore each represents exactly the same good, “ducks, geese and guinea fowls not cut in pieces, frozen”. Other relationships indicate that a code relates to more than one code in the other year indicating either an expansion or suppression of detail or a content change for a particular SCG code. For example SCG 1214.10 (lucerne) in 1995 links to SCG 1214.10.10, 1214.10.20 and 1214.10.90 indicating that detail has been expanded to collect data on dehydrated, sun cured and other lucerne. The linkages shown between SCG 20.04 and 20.05 in 1995 to SCG 20.04, 20.05 and 20.06 in 1996 reflect the redefinition of the codes in SCG 20.04, 20.05 and 20.06 where sugared vegetables have been moved from specific subheadings under 20.04 and 20.05 in 1995 to heading 20.06 in 1996.

Not included in this list are the codes that relate only to the identical code in the other year. Thus, this correspondence accounts for 2,886 of the 17,479 lowest level SCG codes in 1996 and for 2,268 of the 16,860 lowest level SCG codes in 1995.

The “d “ in this concordance table indicates that code has been deleted for 1996 and the “a” indicates that code is new for 1996 and did not exist in 1995.
